

RADIOLOGIC TECHNOLOGY

Radiographers use modern imaging equipment to provide vital information to radiologists for injury or disease diagnosis. They interact with patients by explaining the various procedures and positioning techniques necessary to produce quality images of the body. An extensive knowledge of radiography equipment is essential to produce good radiographs. Radiographers are highly skilled individuals who are an important part of the healthcare team.

OCtech's Radiologic Technology program provides you with a technical education that combines classroom instruction and clinical exposure. You'll get hands-on experience assisting radiographers and radiologists in examining patients of all ages using various imaging modalities and stationary or mobile equipment. Upon graduation from the Associate Degree in Applied Science, you'll be ready for the American Registry of Radiologic Technologists exam and prepared to provide excellent care to patients in our community and beyond.
